Hello there!

I'd describe myself as patient, curious, creative and detail-oriented.

Professionally, I've worked with PHP (including Laravel) and Vue.js, but I'm more interested in frontend technologies, which is why I've spent my spare time learning React.

My main goal is to grow as a frontend developer while exploring more about UI/UX design and improving my web and graphic design skills on my own. On a personal note, I'm friendly, optimistic and believe you can work with passion and enjoy the process at the same time.

Personal Portfolio

Designed and developed using React.js and SCSS.

Explore my projects, design approach and coding style in detail.
